

LZT Launches Voice Server®

News Release

Enterprise 2.0 Voice Server®

9th of May 2008- Perth, Australia

Level Zero Technologies is pleased to announce the general release of its Enterprise 2.0 - **Voice Server®**. The Voice Server® is part of a family of real time collaboration and communications (RTCC) solutions offering an advanced productivity environment for innovative organizations.

Voice Server® is a voice over IP (VOIP), telephony solution that provides full featured services to organizations both large and small. It specifically addresses the need to simplify business communications and deliver improved streamlined functionality across an entire enterprise.

The LZT Voice Server® offers organizations strong scalability; a single high end Voice Server® can handle up to 1,000 extensions and multiple server's can be clustered for a high availability and redundant solutions. Voice Server's are highly configurable and offer several levels of configuration/programming. Most configuration needs can be met via simple dial plans with more advanced requirements being managed via a number of application programming interfaces (API's) to extend functionality.

A supplementary range of hardware SIP IP handsets, PC soft phones and other peripherals such as wireless devices are also provided for specific voice termination needs.

A summary of the business benefits include:

- Reduced telecommunications costs - full SIP trunking support allows greater choice of service providers including new generation ITSP's
- Open Source licensing does not require individual or per seat licenses creating a much lower entry point to VOIP telephony
- Extend access and a consistent approach to communications to all employees whether they are working in their office, a remote office, traveling or at home
- Employee productivity improvements with an ability to integrate with line of business applications
- Presence capability when integrated with the Instant Messaging Server®
- Users can have a "single business number" removing duplicity and expense

About Level Zero Technologies:

Level Zero Technologies has taken the concept of **Enterprise 2.0** and developed a range of complimentary solutions that fulfill the need for unified real time collaboration and communications within enterprises. We have brought together technologies that address collaboration, instant messaging and voice services to enable organizations of any size to share the benefits of a social productivity environment. These solutions are highly scaleable and can operate standalone or be seamlessly integrated as an organisation grows its understanding and use of Enterprise 2.0. technologies.
